Cookie & Local Storage Policy

NORVEL CAPITAL · 27 October 2026

Essential storage

The site uses browser storage for language preference, authentication, session security and account or payment steps requested by the visitor. These functions are needed to provide the selected service.

Optional referral attribution

If enabled by the visitor, the site stores a referral code in local storage for up to 30 days so a sign-up can be attributed to its referral source. This option is off unless the visitor chooses it. The code is removed when the option is declined or disabled and expires after 30 days.

Form security

When a visitor opens a consultation form, Cloudflare Turnstile is loaded from challenges.cloudflare.com to detect automated abuse. Cloudflare states that Turnstile processes technical signals for this security purpose. See the Turnstile Privacy Addendum. The site does not currently load analytics or advertising tags.

Choices

Visitors can choose “Essential only” or enable referral attribution in the site notice, and can change their choice at any time using Cookie settings. Browser settings can also clear local storage, which may interrupt sign-in, saved steps or language preferences.
